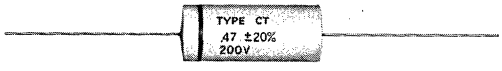
Film and Paper Dielectric Capacitors

Nytronics' broad experience in film and paper dielectrics is represented in a line of standard units for the aerospace, computer, instrumentation and consumer markets. The extensive Nytronics facilities are also available for production of custom components for use in these markets. A wide range of configurations and types is available to meet the most stringent requirements.

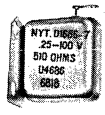
PSF SERIES — POLYSTYRENE AND FOIL Hermetically sealed in metal cases, these units are designed for applications requiring high insulation resistance, low dissipation factor, and minimal dielectric absorption. They are applicable for designs requiring high capacitor stability. Available in standard tolerance of ± 1% to ± 20%. They can be provided to special close tolerance requirements of ± 0.1%, as well as matching sets for application in digital computers, precision timing circuits, and laboratory standards.

RPM SERIES — METALIZED POLYCARBONATE Available in tubular cases with glass-to-metal — seal terminals, the RPM Series provides high insulation resistance, exceptional stability and a minimal change in capacitance with temperature. Its self-healing properties, in the remote event of a dielectric breakdown, provide an extremely reliable unit. It also offers a low dissipation factor for AC applications.



MAF SERIES — MYLAR AND FOIL Designed for applications requiring a flat capacitance change with temperature from +15 to +65°C, the MAF series provides exceptional electrical properties in the temperature range of −55°C to +125°C. The dissipation factor at room temperature is less than 0.6%. The extended foil design provides for positive electrical contact between leads and electrodes irrespective of the operating voltage.

MAM SERIES — METALIZED MYLAR The MAM series offers a reduction in size over the MAF series. It's self-healing property, in the remote event of a dielectric breakdown, makes this hermetic unit suitable for the most stringent applications. Special capacitance tolerance of ± 1% can be provided on a special order basis.



AFS SERIES — KRAFT AND FOIL Hermetically sealed with compression type glass-to-metal solder-seal terminals the AFS series is approved to MIL-C-25. Designed for operation from −55°C to +125°C this series is intended for use in military and industrial electronics.

Various packaging configurations are available for the series shown above:

- wrap and fill
- plastic
- standard glasseals and other custom hermetic enclosures

Other dielectric series are available such as Teflon, Metalized Paper, Combination Films and/or Film Kraft.

STRAIGHT-CYLINDRICAL

The "slug" type of tantalum capacitor utilizes a porous anode of sintered tantalum. Intended for polar applications, these capacitors offer the best characteristics of all the types described in this catalog. They exceed the vibration test of MIL-C-3965, Grade 3.

Available from stock in two physical types — the "hat-shaped" type, 3 sizes (U, F, G) and the "straight-cylindrical" type, 3 sizes (SU, SF, SG) which have the same range of capacitance and voltage as the equivalent hat-shape sizes. Hat-shape and straight-cylindrical types are offered in two operating temperature ranges, —55°C to +85°C and —55°C to +125°C. Tolerances: See footnotes under price and stock tables. Units insulated with plastic sleeve are available at slight extra cost. Stock listings below.

†Complete commercial stock no. as follows: If straight-cylindrical capacitor is desired, insert an "S" in the middle of the number where the underlined space is provided as in "30SUB6__." If a hat-shape capacitor is desired, write this number without the space as in "30UB6__." Add K, or M at end of number to indicate tolerance. Add "A" after tolerance letter if insulating sleeve is desired.

*Complete MIL type designation as follows: For hat-shape, uninsulated type insert "44" after "CL__ __" for insulated type insert "45" instead. For straight-cylindrical shape, uninsulated, insert "64" after "CL__ __"; for insulated type insert "65" instead. Insert K, or M before "P" to indicate tolerance.

‡High capacitance units.

Tolerances: K = ±10%; M = ±20%.

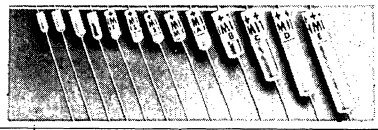
OHMITE tan-o-mite® tantalum capacitors

SERIES TW WIRE



Smallest subminiature electrolytic capacitors available. The anode is specially processed tantalum wire sealed into a silver case. Axial leads are 2" long. Units are insulated with Mylar plastic sleeve. These polar type units are used in DC circuits where capacitance can exceed nominal circuit values (standard tolerance, −0 +100%). Wide use in hearing aids and other subminiature apparatus. Operating temperature range: −55°C to +85°C. Nine of thirteen available case sizes stocked.

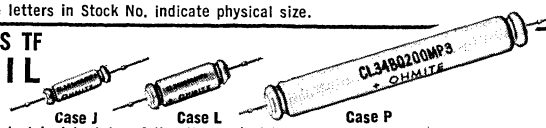
SERIES TF FOIL



Case J Case L Case P

Plain and etched tantalum foil units stocked in polar and non-polar types. The polar unit is intended for applications in which reversals of potential do not occur but will withstand reversals up to 3.75 VDC except where the voltage rating is less. Foil types offer closer tolerance, also leakage and power factor characteristics superior to wire types. The etched foil units afford higher maximum capacitances for a given case size and have somewhat lower leakage current than the plain foil units. Operating temperature range: —55°C to +85°C. Tolerances: Plain foil, ±20% (MIL code "M"). Etched foil, less than 50 volts, —15 +75% (MIL code U); 50-99 volts, —15 +50% (T); 100-150 volts, —15 +30% (S). 1½" axial leads. Designed to meet MIL-C-3965C, Styles CL24, CL25, CL34, CL35. 5 MIL case sizes. All units meet MIL vibration rating Grade 3. Units can be furnished with plastic sleeve.

CAPACITOR CALCULATOR

Pocket size calculator (7" x 2⅝") solves capacitance problems involving frequency, reactance, power factor, dissipation factor, equivalent series resistance, impedance and phase angle — with just one setting of the slide. For convenience in making supplementary calculations, the calculator carries the standard A, B, C, D slide rule scales. Also listed are important capacitance formulae and a comparison chart of different types of capacitors. In heavy, varnished cardboard.

HIGH VOLTAGE CAPACITORS
TYPE LK

MYLAR★ PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed steatite bushings are used, and in the voltage ranges of 2000 and greater, steatite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

SANGAMO ELECTRONIC COMPONENTS

Type 500 Computer Electrolytic

FOR HIGH RIPPLE AND HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost. ***For more complete information write for Bulletin 2236.***

SANGAMO ELECTRONIC COMPONENTS

Types F1-F2-F3 MICA CAPACITORS

The Types F1, F2 and F3 are the smallest of the Sangamo line of transmitting capacitors. They are encapsulated in low loss molded phenolic cases and possess a wide range of voltage and current ratings. The mica and foil sections are pressure clamped, vacuum impregnated and encapsulated in the case in such a manner as to provide stable characteristics and adequate resistance to moisture. All Type F1 and F2 capacitors meet or exceed the applicable requirements of the MIL-C-5 specification.

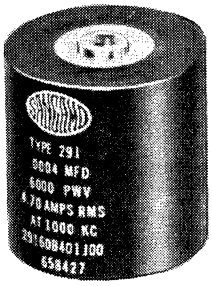
Types 271-272-273-291-292-293-294 MICA CAPACITORS



TYPE 291

TYPE 272

Sangamo transmitting cast mica capacitors are supplied in seven basic case sizes. They are encapsulated in a high quality thermo-setting compound which eliminates moisture intrusion and makes them highly shock resistant. These capacitors are designed for frequencies ranging from 100 kilocycles per second to 3 megacycles per second and are ideally suited for high current and high voltage circuits.

In capacitance and current ratings, Sangamo cast mica units are equivalent to MIL-C-5 Types CM65 through CM90 in molded and ceramic cases, but in environmental capability, operating temperature range, physical size, mounting configuration and reliability, they are far superior. ***FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2324.***

SANGAMO ELECTRONIC COMPONENTS

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is Etherm, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

For more complete information on other ratings, tolerances and voltages, write for Bulletin 2421.

Type CP72 capacitors are furnished in drawn metal cases and are designed to comply with the requirements of specification MIL-C-25. They are impregnated with various dielectric oils to guarantee the desired electrical characteristics available. Capacitors rated at 3000 volts or less are normally supplied with solder lug (B) terminals capable of accomodating a #14AWG wire. Type D and E terminals may be substituted if desired. If brackets are required, specify a choice of spade, lug or footed type.

Type HVC HIGH VOLTAGE PAPER CAPACITORS

Sangamo Type HVC High Voltage capacitors are impregnated with a halogenated hydrocarbon called Diaclor B. This oil provides the desirable electrical performance characteristics for the most severe applications. They are sealed in shock and vibration resistant drawn rectangular or cold-rolled steel cases. The absence of solder seams eliminates oil leakage and contamination from solder flux. A wide variety of capacitance ranges are available in voltage ratings up to 50,000 volts d-c. Spade, footed or wrap-around brackets are optional at extra cost, but will not be furnished unless requested. When choice of brackets is not indicated, spade type will be supplied.

For more complete information write for Bulletin 2425.

SPRAGUE CAPACITORS

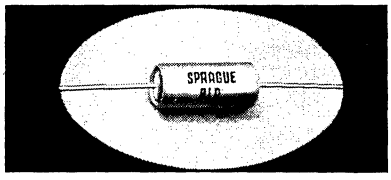
VITAMIN Q® SUBMINIATURE PAPER CAPACITORS



These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: −55°C to +85°C and −55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

- The Best of Their Type Possible to Produce at the Present State of the Art
- Rated for Operation at 125°C WITHOUT VOLTAGE DERATING
- Unique Dual Dielectric —a Combination of Metallized Paper and of Polyester Film, Impregnated With Special High-Temperature Mineral Wax
- Subjected to Stringent Quality Control During Manufacture
- Higher Insulation Resistance Than Any Other Metallized Paper Capacitors—at 125°C, Minimum Product of Insulation Resistance and Capacitance is 10 Megohm-microfarads for 200 V Units or 40 Megohm-microfarads for 400 and 600 V Units
- Capacitor Sections are Effectively of Non-inductive Construction, Resulting in Capacitors Unmatched in Performance Quality by any Other Metallized Capacitors
- Hermetically Sealed, with Glass-to-metal Solder-seal Terminals
- Have Unusual Self-healing Characteristics, in the Rare Event of Capacitor Dielectric Breakdown
- May be Used at Extremely Low Voltages Where Metallized Paper Construction has Previously Been Unsatisfactory
- For Complete Performance Characteristics, see Latest Issue of Engineering Bulletin 2211
- For Units With Outer Plastic Insulating Sleeves, Change Last Digit of Cat. No. From "2" to "4"

TANSITOR TANTALUM CAPACITORS

TYPE: TES −55°C to +85°C

Tansitor Type TES tantalum capacitors are unique small foil tantalum capacitors ideally suited for use in printed circuits. They are similar in performance to CL34 and CL24 type capacitors, but offer significant savings in space because both leads emerge from one end of the capacitors. They operate reliably over the temperature range of −55°C to +85°C.

As the name implies, Tansitor Type CM or custom-made capacitor "packages" are designed to fill special or unusual tantalum capacitor needs, most frequently in the area of extra high capacitance.

In most cases, Type CM units have employed tantalum foil internally. By its nature, however, a CM unit may employ internal sections of solid or wet sintered anode tantalum capacitors where their respective characteristics are desired. Combinations of foil, solid and wet styles are also available, if needed.

A wide range of ratings are available, with capacitance values as high as 310,000 microfarads. The CM series, however is adaptable for many ratings beyond those suggested, even to 1 farad and above, if required.

Dual or plural ratings are available in a single case or other components can be potted in the same case with the capacitors. For specific applications contact Tansitor Electronics, Inc.

TANSITOR TANTALUM CAPACITORS
TYPES: CL64 & CL65 — CHARACTERISTICS "B" & "C"
−55°C to +85°C and −55°C to +125°C

Tansitor wet sintered anode capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965C for MIL types CL64 and CL65. Encased in a fine silver can, the sintered porous tantalum anode provides exceptionally high capacitance per unit volume. These units exhibit extremely low leakage currents, low power factor, and little change in capacitance with frequency.

As opposed to "Shoulder Type" construction of other wet types, the CL64 and CL65 offer a straight cylindrical shape, readily lending them to flat circuit applications. CL 64 and CL65 styles are equivalent to Tansitor Type W. Tansitor Type WF equivalent with neutral electrolyte is also available.

*For dimensions of insulated units add approximately 0.065″ to length, 0.015″ to diameter. Basic case dimensions for insulated style are same as uninsulated.

TANSITOR TANTALUM CAPACITORS — TYPE WF

(Equivalent to MIL Styles CL64 & CL65)

−55°C to +85°C and −55°C to +125°C

Tansitor type WF capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965 for the ratings listed under MIL Types CL64 and CL65, except that tantalum foil is used in place of tantalum sintered slugs.

In addition to the advantages in volume, low leakage current and low power factor normally associated with this style of capacitor, the WF also offers an acid-free construction and voltage ratings up to 300 VDC at 85°C and up to 200 VDC at 125°C where 125 VDC and 85 VDC were previously considered the upper limits. The WF is lighter in weight, too, thus offering even more advantage for aerospace applications.

CLEANING SOLVENT

"CAEON SOLVENT #27"

(Trichlorotrifluorethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

• NON-FLAMMABLE • VIRTUALLY NON-TOXIC • CHEMICALLY AND PHYSICALLY PURE • CHEMICALLY AND THERMALLY INERT • STABLE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeon #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluable in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface 'Residue-Free'. All standard methods of using a solvent may be employed.

VECTOR D.I.P. PLUGBORDS

VECTOR PLUGBORDS speed plug-in circuit construction because the pre punched holes accept push-in terminals, eyelets or turned terminals and the contacts are already on the board. Epoxy paper boards meet requirements of MIL-P-22323, Type PEE; Epoxy glass is G-10 grade per MIL-P-18177; copper clad Epoxy paper meets MIL-P-13949 Type PX, and copper clad Epoxy glass meets MIL-P-13949.

838 SERIES same as above, except with 2 oz. copper etched contacts on .156″ centers. 838PWE has TO-5 transistor base pad network one side. "GN" types have nickel plated gold flashed contacts.

812, 837, 848 SERIES furnished with attached Elco Varicon contacts have .062″ holes on alternate 0.1″ centers.

VECTOR D.I.P. PLUGBORDS permit quick hookup of integrated circuits. Boards are punched with .041″ holes on 0.1″ centers and have mounting pad areas for twelve D.I.P.s. Etched lines .070″ wide spaced on .1″ centers run horizontally on front side and vertically on rear side of board to reduce hand wiring. Listed boards have: (A) 44 etched contacts (total front and back) spaced on 0.156″ centers; (B) 35 Elco Varicon contacts on 0.1″ centers; (C) 39 Vector Edge-pin contacts on 0.1″ centers; (D) 78 etched contacts (total front and back) on 0.1″ centers. Patchcords are available.

Receptacles listed are glass filled diallyl phthalate.

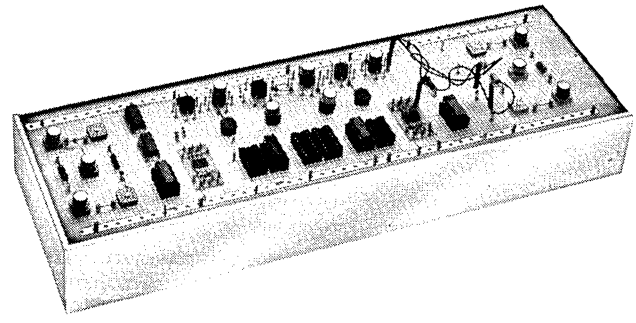
29X INTEGRATED CIRCUIT EXPERIMENTER'S KIT

NEW



The 29X Kit is a special group of new Vector products especially designed for fast, easy hookups of nearly all package configurations of integrated circuits. The mounting surface is a pre-punched Micro-Vectorbord* having .042" diameter holes on 1/10" grid spacings supported on Vector Frame-Loc Rails 2" high. Dual-in-line packages may be fastened directly to the breadboard with the tails extending through the holes; or special sockets supplied may be used which have square tails which also push into the board. Integrated circuits of the TO-5 type may also be mounted with wafers, which are supplied, or in sockets supplied with leads formed to plug into the board. Transistor sockets whose leads also fit the board are supplied. Supplied T42-1 Micro-Klip push-in terminals fit board holes and are ideal for mounting discrete components of various types. Inbord Pins of .040" diameter also push into the holes for tie points or plug points. Wiring of these leads may be done by use of supplied polyurethane coated solderable wire which may be wrapped around the terminals and soldered through the insulation or by "Daisy Chain" patch cords which will connect directly to the wire-wrap tabs or the round pins, thus facilitating quick experimental connection. Flatpacks with .05" spaced leads may also be mounted by use of furnished adapter plates which plug into the holes of the breadboard. These will normally be soldered to the adapter plate terminals.

KIT CONTENTS
14- and 16- pin DIP Sockets, TO-5 ICP Sockets, Transistor Sockets, Flatpack Adapter Plates, T42-1 ZIP Terminals, K24C Inbord Pins, Adapter Wafers, "Daisy Chain" Patchcords, DIP Extractor Tool, P149A Insertion Tool for T42-1 Terminals, Bus Strips, Layout Paper, Special Contacts, assorted wire, miscellaneous mounting hardware and P pattern Micro-Vectorbord.*

SLANTING BASE MODELS

These kits, in a variety of sizes and with slanted-front bases for mounting switches and controls, are the final answer to breadboarding applications. Each model allows the user to incorporate every mechanical or electrical component necessary to have a self-contained working unit. This "total-circuit" concept has enabled engineers and experimentors to not only design and develop, but to actually use the finalized version as a working model having characteristics of a production unit. Such features as breadboarding on either top-side or under-side by the use of self-locking feed-through terminals and universal mounting brackets, allows extremely short lead lengths on such parts as capacitors, resistors, controls, sockets, transistors, etc. The four-sided metal base enables choice of location for fuse holders, switches, potentiometers, indicator lights, test jacks, and similar items. Each metal side will accommodate ¼", ⅜" and ½" control shafts. Slanted front panel provides for excellent visibility for critical control adjustments.

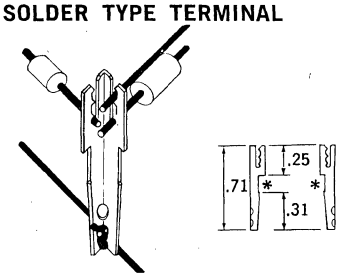
SOLDER TYPE TERMINAL



A feed-through terminal for "A" pattern punched board made of half-hard brass, tin plated. Two serrated slots of .032" will accommodate three or more wires per slot, while two .062" holes at bottom allow additional connections. Insertion or extraction is accomplished with part 20022 tool or long-nose pliers. Locking notch (*) insures terminal from falling out of punched board. Its great feature is that wires are held securely before soldering. Request quotation for gold or silver plating.

JEFFERS MOLDED INDUCTORS

JEFFERS inductors are for use at radio frequencies and in pulse circuitry. The listed standard inductors, in values from 0.1 μh through 10,000 μh, are designed to meet the requirements of MIL-C-15305 Revision C.

Important features of JEFFERS standard inductors.

- High Reliability, proven by over 253,470,000 unit test hours.
- High Q and SRF.
- Maximum protection with minimum dimension as a result of full encapsulation in a thermosetting mineral filled plastic jacket.
- Assured uniformity of product, a result of stringent Quality Control and Inspection procedures at every production stage.

Suffix letter on part number denotes standard tolerance. J = 5%, K = 10%, M = 20%.

These inductors, in standard tolerances, are available for immediate delivery from your local Airco Speer Distributor.

Nicknamed the "Micro-Mite", these rugged coils exhibit high Q and very low distributed capacity, all concentrated into an amazingly small package. They are ideal for use where weight, space and high Q considerations are involved. Size reduction ranges up to 80% of equivalent standard molded chokes. The construction of these coils permits miniaturization without the use of ferrite materials, thus maintaining temperature stability. This series of molded coils conforms to MIL-C-15305.

Molded Choke Coils Color Coding

For cylindrical choke coils. Cylindrical choke coils shall be marked with five colored bands. A silver band MIL identifier of double the width of the other four bands, located near one end of the coil, identifies military radiofrequency coils; four other bands of equal width, three indicating the inductance in microhenries and the fourth band indicating the tolerance in percent. Color coding shall be in accordance with the color code of table II. When either the first or second band of the three bands is gold, this band shall represent the decimal point for inductance values less than 10, and the other two bands shall represent significant figures. For inductance values of 10 or more, the first two bands shall represent significant figures, and the third band shall represent the multiplier. For small units, dots may be used instead of bands, when specified. The diameter of the MIL-identifier dot shall be larger than the other dots. The colors used shall be in accordance with MIL-STD-174. Typical color coding for units with inductance values less than 10 and for 10 or greater is shown on figure 1.

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries or 5 decades with 8 coils per decade. Inductance values are increasing in steps of appr. 50%. Either single layer or 3-pi universal winding is used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture and fungus-resistant varnish.

Sub-Miniature R.F. Chokes

An extremely versatile series of iron core R.F. chokes designed to meet the industries' demand for high reliability, ultra-miniature components. The coils are ideally suited to network and filter design, delay lines, and computer applications. Rated at 50 miliamperes maximum D.C. current they are more than satisfactory for most applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per JAN-T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class B of MIL-C-15305.

Air Core Printed Circuit R.F. Chokes

The following R.F. Chokes have been designed to offer a wide range of inductance values for use in printed circuit applications. Our standard stock of these coils is impregnated with a high grade coil varnish to prevent moisture absorption. On special orders we can supply these items treated with fungus resistant material, or encapsulated in epoxy resin to meet MIL-C-15305.

Coil length: 7/8" on all items. Diameter as tabulated.

R.F. Transformer for HV Power Supply

These R.F. power supply transformers for use with television receivers and cathode ray oscilloscopes make it possible to construct an inexpensive source of high voltage DC. Two types are available, the #4525 for voltage to 5000 DC and the #4526 for voltages to 10,000 DC (or 30,000 DC in a voltage rectifier tripler circuit). Type 1B3-GT tubes are used as rectifiers and the R.F. oscillator circuit uses one or more type 6V6 or 6Y6 tubes connected in parallel. Medium Duty Duo-Lateral Line Filter Chokes

Miller Duo-Lateral wound chokes combine small physical size with low distributed capacity—an essential requirement for radio interference filter chokes—and are characteristics found in no other type of radio interference filter choke. These chokes are particularly recommended to manufacturers of farm lighting plants, sign flashers, signal systems, oil burners, diathermy equipment and all types of intermittent switching systems. Miller Duo-Lateral wound filter chokes are specially designed for technicians and electricians who find it desirable to construct their own filters as a part of the equipment being manufactured. When used with amateur and commercial transmitters, filters constructed with Miller Duo-Lateral wound chokes will prevent feed-back into the power line, thus eliminating carrier radiation within the electrical wiring system. Miller Duo-Lateral wound chokes are wound on ceramic forms with suitable brass terminals.

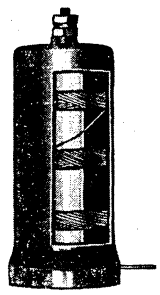
High Tension Filter Choke



Through extensive research, Miller has developed what is believed to be the only satisfactory filter choke for the elimination of radio interference generated by high-tension (secondary circuit) neon sign animators and tubing. Chokes are sectional wound on ½" diameter by 2½" long ceramic forms and are enclosed in a weatherproof bakelite shell. All windings are impregnated against moisture absorption and all hardware is cadmium plated. The #7875 choke is insulated for 15,000 volts and for continuous operation at currents up to 100 milliamperes. The filter chokes are easily installed in existing installations and they are fully guaranteed. Many cities and communities have radio interference ordinances and these chokes are an indispensable part of every neon sign installation. Each installation requires one choke per circuit, plus one for the common circuit of the transformer and one for the common circuit of the animator. A complete circuit diagram is supplied with each choke.

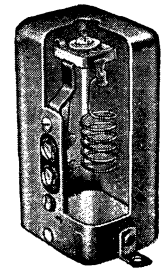
TV and FM Wave Traps



These new high-Q series-resonant wave traps may completely eliminate interference and undesirable images in television and FM receivers. When tuned to the frequency of interfering signal, they are very effective in reducing sound bars and herringbone patterns, or streaks and tearing in the television picture. Superimposed pictures from two different stations also may be prevented. For FM receiver use, cross-talk from interfering station is greatly diminished. Use of one of these traps generally will reduce interference caused by a near-by transmitter to a degree which will permit satisfactory reception from a weaker station.

Resinite Adjustable R.F. Coils

Resinite is a phenolic impregnated tubing which combines the mechanical and dielectric advantages of phenolics with the high dielectric strength, moisture resistance, and non-corrosive properties of cellulose acetate. Resinite can be certified to MIL-P-79B Type PBG. This series features an extremely wide choice of inductance ranges and utilizes only the highest quality commerical materials throughout. They find application where the severe moisture resistant characteristics of the encapsulated units and the mechanical properties of the ceramics are not required.

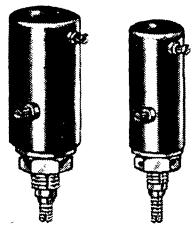
Encapsulated Adjustable R.F. Coils



"UNISEAL," a recent development of the J. W. Miller Co., has successfully been applied to the production of encapsulated adjustable R.F. inductors. The primary difficulty encountered in the encapsulation of adjustable inductors is the prevention of moisture entering the coil form around the threaded stud. The moisture being subsequently absorbed by the coil form resulting in deterioration of coil efficiency. The open end is filled with silicone grease and bonded to the brass bushing which holds the adjustable core. The grease in this case is not intended to prevent moisture absorption since the coil is completely sealed by the use of the epoxy form. It does serve to provide a smoother turning core. The coil assembly is next inserted into another epoxy shell and the entire assembly filled with epoxy resin. This forms one solid mass of epoxy from the inner coil form to the outer shell. The unit is impervious to moisture and is extremely shock and vibration resistant.

Horizontal Mounted Printed Circuit Ceramic Adjustable R.F. Coils

COILS WOUND ON FORM NO. 47A024

*Self resonant frequency measured at maximum inductance

Fundamentally equivalent to the 46A series in electrical characteristics, this series provides the designer with the choice of a horizontally mounted coil for use where height is a problem or access to the top of the P.C. board is restricted.

Shielded Subminiature Adjustable R.F. Coils

These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

Dimension: 1/2" sq. x 5/8" high. *Minimum self resonant frequency measured at maximum inductance.

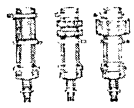
Sub-Miniature Adjustable R.F. Coils



The following permeability tuned coils wound on silicone impregnated ceramic forms will find many applications where space restrictions rule out the use of the larger size coils in the 4400 and 4500 series. These coils mount by means of a bushing which requires an 11/64" hole.

Dimensions (form): 3/16" diameter x 5/8" long.

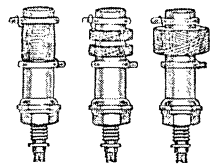
Standard Adjustable R.F. Coils



This series of variable inductors offers a higher Q coil with a slightly larger inductance range than can be obtained in either of the two smaller series. The same high grade silicone-impregnated ceramic forms are used in their construction to insure a product of high quality. These coils mount by means of a bushing that requires a 1/4" diameter mounting hole. Hardware consisting of nut, lock washer, and spring clip is supplied.

Dimensions (form): 3/8" diameter x 1 1/16" long.

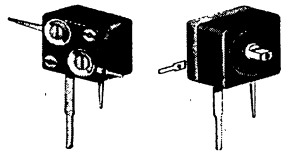
Micro Miniature F.M. Variable Capacitor



A companion variable capacitor to our part No. 2108 ceramic variable. The ceramic material has a temperature coefficient of −120 parts per million per degree C over the range of −20 to +70°C. The use of silvered ceramic rotor and stator assemblies results in a capacitor that is completely free of microphonics. This is very important in the design of small F.M. receivers that are subject to shock and vibration.

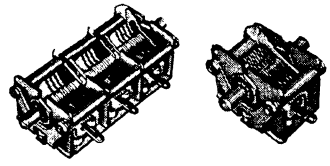
Precision Variable Capacitors



The capacitors we list in this group represent the highest standards that can be achieved in a commercial product. The rotor shaft revolves in a ball race at both front and back, with the torque controlled very closely. Each section has its own wipers grounded to the frame to assure that the rotor does not present ground loops. The stator in each section is supported on four ceramic pillars to assure excellent mechanical stability as well as insulation resistance better than 1000 megohms. The complete mechanical assembly is silver plated to keep R.F. losses to a minimum.

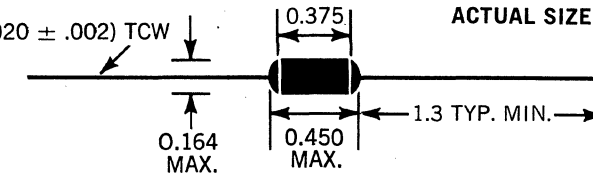
NYTRONICS, INC. Inductors

ESSEX ELECTRONICS DIVISION

WEE-DUCTOR

Subminiature Shielded Inductor with high inductance-to-size ratio.
0.10uH to 180,000uH in 76 values
Designed to meet MIL-C-15305C.

The **WEE-DUCTOR** was the first miniature shielded inductor that Nytronics standardized for stock delivery. This encapsulated non-flammable shielded unit in a 0.164" diameter by 0.450" long envelope offers the design engineer extremely high inductance for density packaging. The WEE-DUCTOR is designed to meet the environmental requirements of MIL-C-15305C, Grade 1, Class B.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% (Q-Meter); 27uH to 1,000 ±5% (1KC Bridge); 1,200uH to 56,000uH ±10% (1KC Bridge) 68,000uH to 180,000uH ±20% (1KC Bridge) measured at point on leads ½ inch from body.

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_0 to be not less than 80% of published data, and measured with full length leads on Q-Meter.

Q and Rp Values: Measured on Q-Meter. Minimum Rp values on published data sheet are conservative.

Maximum Current: Based on temperature rise not to exceed 40°C at 85°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0087 cubic inches **Weight:** 0.75 grams maximum
Shielding: Less than 3% coupling with two units measured side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305C.
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305C, Grade 1, Class B. Low frequency 10 to 55 cps @ .06" maximum total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS.
Marking: Printed with pertinent data.

RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS

Ball Bearing Type **Compact, durable, exceptionally smooth action**

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Type "RDL" provides "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear.

LIMIT STOP COMPONENTS

Designers can now consider the limit stop as a component to design with, such as potentiometers, capacitors, or other standard units. The simplicity of adjustment and the large number of available turns enables the stop range to be set with extreme precision. Conveniently located dual locking screws maintain settings under all conditions of shock and vibration.

Available for 1/4" and 3/16" shafts.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

HOW TO DESIGNATE SHIELD SIZE AND SHAPE

This "Shield Selector Guide" has been created as an aid to shield designers. Properly used, it will eliminate (or minimize) your design time, and facilitate the ordering of the correct size and shape shield. There is no longer a need to draw your own prints. We probably have made shields the same, or similar to your needs.

Shown are representative configurations of shields that we feel cover most applications. However, other combinations of these shapes can easily be created, to meet your specifications. Just let us know dimensions.

Typical P/N and ordering information is shown to the right.

TYP P/N

3.6 — FRONT I.D. OF SHIELD
B — CONTOUR OF SHIELD
2.3 — REAR I.D. OF SHIELD
L.3 — SHIELD LENGTH IN INCREMENTS OF 1″
Using alphabet starting with 'A' = 1″; 'B' = 2″; 'C' = 3″; etc.
Do not use letters 'I' or 'O'
(In Typ P/N above, L.3 = 11.3″)

JAN's Design Engineers are available to assist you with your shield requirements. • We will design and manufacture shields to your specifications.

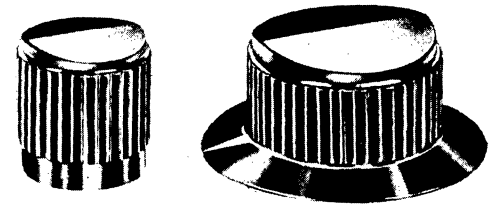
SAFETY KNOBS
"PRESS-TO-TURN" KNOBS.
For Low Torque Applications

Knobs spin freely... and **MUST BE PRESSED-IN** while making changes.

Developed specifically to prevent inadvertent changing of settings.



For basic dimensions, see our "De-luxe Instrument Knobs", (90, 125, 175 and 225 series).

SLIP-CLUTCH With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch";* automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

**Normally set for 3-6" lbs. Can be modified for other requirements.*

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

PILOT LIGHT ASSEMBLIES

BNE Series — featuring a 1-piece body construction, this miniature neon pilot is ideally suited to indicate toggle switch positions, or for other display configurations with space limitations. A particular characteristic of this model is the compact lens system protruding slightly above the panel. Operating voltage, 75 VAC without resistor; for 115 VAC operations use external resistors (150K for standard intensity, 33K for high intensity) not supplied. Single 5/16-32 mounting.

BNF Series — similar to the BNE Series except that the lens system extends a greater distance beyond the panel for a bright illumination. This model has a permanent built-in neon and operates on 75 VAC. An external resistor required for 115 VAC. Turret type lugs are used for simplified hookup. Single 5/16-32 mounting.

BND Series—combines an entirely new look in a space-saving pilot assembly. The neon protrudes beyond the panel to provide maximum light intensity. This model is available with or without built-in series resistor for 75V or 115V operation, and is also available as standard or high intensity. Single 3/8-32 mounting.

(ADC) bantam jack panels

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks on a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

specifications

1. **Panel:** Aluminum alloy, extruded. Finished black anodized per Mil-A-8625A. Overall dimensions 1¾"x19"—Standard EIA mounting centers.
2. **Jack Mounting:** Four moulded plastic inserts, each provides for 24 jacks. Pairs of jacks on 5/16 inch centers. Double-row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.
3. **Designation Strip:** Extruded clear plastic.
4. Panel assemblies are available with a wide variety of two and three-conductor jacks. See listing of Bantam jacks for complete details.

PJ-731 Double row panel, assembly less jacks, holds 96 jacks.
PJ-737 Double row panel, with 48 pair (96 total) PJ-818 jacks.

(ADC) molded terminal blocks—20 pin

Known for their ruggedness, ADC "Christmas Tree" Terminal Blocks have become standards in the Broadcast and Telecommunications Industries. The ADC 20-Pin Terminal Blocks are molded of durable, black, thermo-set plastic per Military specifications MIL-F-14F. Terminals are brass with a tin alloy plating for lasting solderability (see specifications below for details on solderability). The PJ-101 series blocks have terminals graduated in length for ease of wiring. The Figure 2 solderless terminals as furnished on the PJ-161 series blocks are designed to accommodate AMP No. 60197-1 Connectors as supplied by American Pamcor, Inc. or may be used as regular solder terminals. All Terminal Blocks are numbered along the top row for easy terminal identification.

BEAUPLUG 3300 SERIES PLUGS & SOCKETS

The 3300 Series BEAUCHAINE ELECTRICAL CONNECTOR line has been developed to fulfill the Industry need for a reasonably priced, reliable and versatile connector for chassis, cable and modular use where space is not a prime consideration. The 3300 Series is made in 2, 3, 4, 6, 8, 10, 12, 15, 18, 21, 24, 27, 30 & 33 contact configurations.

Male contacts are brass, cadmium plated. Female contacts are phosphor bronze, also cadmium plated and are covered by U. S. Patents # 3,271,728 & 3,311,867 For greater dielectric strength, protection and economy, we have developed the molded POLYPROPYLENE and the new POLYCARBONATE backshells (or caps) which are described on the following page.

BEAUPLUGS meet or exceed UL Std. #498, all contacts carrying "rated" current simultaneously.

Current (2-12 Contacts) -- 7.5 amperes & 1875 watts
Current (15-33 Contacts) -- 4.5 amperes & 1125 watts

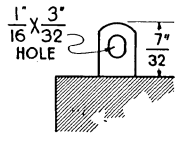
BEAUCHAINE BACKSHELLS (or Caps) are molded of UL and CSA approved black POLYPROPYLENE which has excellent dielectric qualities, resists scuffing and abrasion, most acids and alkalies, and won't rust. One of the most interesting features from the standpoint of your Design, Engineering and Purchasing people, is that a wide variety of cable hole sizes and shapes are available from stock tooling. (We also supply these in the -BBS or "Blank Backshell" form, which have no cable openings.) Please refer to Pages 3300.14 and 3300.15 in our B-5 Catalog.

As some of our customers have extreme requirements for connectors using backshells, we now offer, at a slight premium, all of our cable-mounted connectors with POLYCARBONATE (Lexan) molded backshells. These are on Factory Order only and are not stocked by Distributors. However, your Distributor can order them for you.



CONTACT TAIL configurations offered in the 3300 Series

1. Standard Solder Type in both male and female. (P-3300 & S-3300)

2. Solderless spade type for use with "faston" type .120" receptacles, such as Amp #41960 or similar. (P_1-3300 & S_1-3300)

The 4400 Series BEAUPLUGS are chassis mounted only and are used where the connectors have been pre-wired for installation from the rear of the panel. Many of our customers are using the Tapped Angle Bracket (-ABT) types, which save on parts inventory and installation time.

For mating cable connectors using backshells (or caps), use the 5400 Series, which are listed on the following page. Electrical ratings are identical.

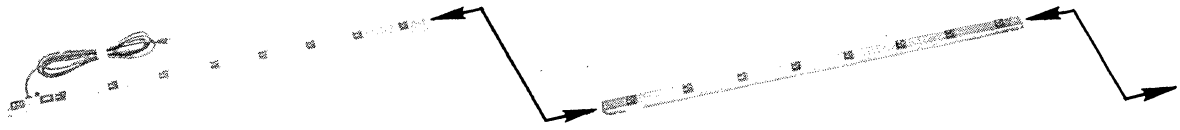
ADD-A-STRIP Long-Line Power Controls

Interlocking ends let you add as many lengths as needed... makes one continuous power strip...any length.



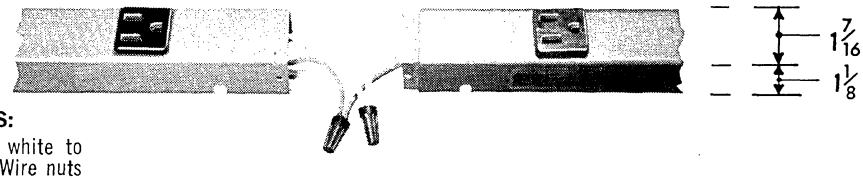
MASTER SECTION

Master section, complete with ground type outlets, line cord, power switch, power-on indicator light, and 15 A, 125 V fuse or circuit breaker, as desired. End cap on **master section** removes for adding **auxiliary section** described at right. Hardware for adding sections is self-contained in each section.

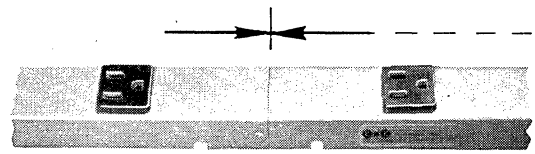
AUXILIARY SECTIONS

Auxiliary sections have a mating end that interlocks into end of master section (or other auxiliary section) . . . forms a smooth, flush, mechanical connection. Two self-tapping screws secure connected sections. As many auxiliary sections as desired can be added end-to-end to form one continuous power strip of any length.

HERE'S ALL YOU DO TO CONNECT SECTIONS



❶ CONNECT WIRES:
Connect black to black, white to white between sections. Wire nuts are supplied inside every section.



❷ PUSH ENDS TOGETHER:
End of one section slides easily into mating end of add-on section. Fasten connection with two retaining screws.

A great idea from CBC...the leader in Power Controls...

Use ADD-A-STRIP units in factories, schools, workshops . . . anywhere that you want plenty of outlets without high cost . . . but where safety, appearance, and ease of installation are important. Ideal for other uses too—garages, basements, and other areas where behind-the-wall wiring is impossible or undesirable. Saves dollars of rewiring costs in expanding facilities.

SPECIFICATIONS

LENGTHS: 12", 24", 36", and 48".
OUTLETS: One grounded outlet for each 6" of length.
LINE CORD: 6', 10', and 15', three-wire with grounded plug (master section).
PROTECTION: Choice of fuse or circuit breaker (15 A, 125 V).
FINISH: Tough, scuff-resistant vinyl. Attractive, brown, stipple-tone finish.

"Jones" Type Plugs, Sockets

300 SERIES CONNECTORS are from the famous line of "Jones" plugs and sockets which have been a standard of the electrical and electronic industry for over a generation. For medium duty applications, they are small in size with good separation between contacts.

Molded bakelite insulator has 2 to 33 cadmium-plated phosphor-bronze contacts, for cap or panel mounting. All plugs and sockets are polarized so that plugs of one size cannot fit into sockets of another size. "Knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. Rated Voltage...730 Volts rms. Contact Resistance....016 Ohms max. Rated Current...10A max.

In accordance with UL Standard #498, (all contacts carrying "rated" current simultaneously) as follows: Current (2-12 contacts).....7.5 amperes (15-33 contacts).....4.5 amperes Wattage (2-12 contacts).....1875 watts (15-33 contacts).....1125 watts

"Jones" Type Plugs, Sockets

400 SERIES PLUGS AND SOCKETS are rated for duty beyond the range of the 300 series. Maximum rating is 1200 volts r.m.s. at 15 amperes. Average contact resistance is .001 ohms.

2, 4, 6, 8, 10 and 12 contact sizes are available, each size being polarized and suitable for either cap or panel mounting. "Knife-switch" type socket contacts are made of cadmium-plated phosphor bronze. These contacts engage both sides of the flat plug contacts, providing double the contact area.

Plug prongs are made of cadmium-plated brass ¼" wide by 1/16" thick. Caps are finished in black wrinkle and equipped with fibre lining.

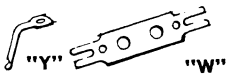
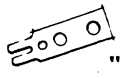
Barrier Terminal Blocks

Interposed barriers between terminal positions in Jones Barrier Terminal Blocks produce higher voltage ratings and protection from frayed wire faults. Bakelite base has eyelets and binder screws of nickel plated brass.





TERMINALS

Barrier type terminal blocks are also available where indicated with "Y", "W" or "¾ W" terminals. Made of hot-solder-dipped brass. For blocks with "W" terminals, change suffix "Y" to "W", for blocks with "¾ W" terminals, change suffix "Y" to "¾ W" (2-172-W, 2-172-¾ W, etc.); same price.

Barrier Terminal Blocks

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. The heavy construction adds strength to the block, minimizing warpage and shrinkage. A top-mounted marker strip can be furnished.

Barrier Block Fanning Strips

Fanning strips serve as a convenient means for rapidly making and removing connections from barrier terminal blocks. They facilitate cable or harness wiring and minimize the possibility of subsequent wiring errors. Both straight and angle type fanning strips are available. Terminals are made of .032" brass, cadmium-plated. The 3/32" thick, ½" wide XP black phenolic mounts are furnished with a hole, in either the right or left side, for securing the cable with lacing twine. For larger sizes, use of a cable clamp is recommended.

Marker Strips

Marker strips are used for the purpose of labelling terminal positions on barrier terminal blocks and insulating exposed portions of terminals from metallic mounting surface. Marker strip mounting holes correspond with those on appropriate barrier terminal block. Made of 1/32" vulcanized fibre and numbered sequentially from 1 with legible white numerals. Part number indicates number of terminal positions accommodated.

"500" series marker strips are made of 1/16" XP Bakelite, ¼" wide and numbered sequentially from 1 with ⅛" legible white numerals. Mounted on top of terminal strip as illustrated, with mounting screws furnished.

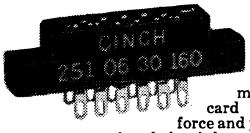
Printed Circuit Edge Connectors

BIFURCATED CONTACT EDGE CONNECTORS



Designed for minimum printed circuit card wear, low insertion force and positive contact with printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with .00003" minimum gold plated. Types 250, 251 and 252 utilize bifurcated contacts, permitting two flexing surfaces instead of one for positive contact.

Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Connectors meet requirements of MIL-C-21097A (Ships) where applicable. One plastic polarizing key furnished unassembled. Rating: 830 v. AC rms.

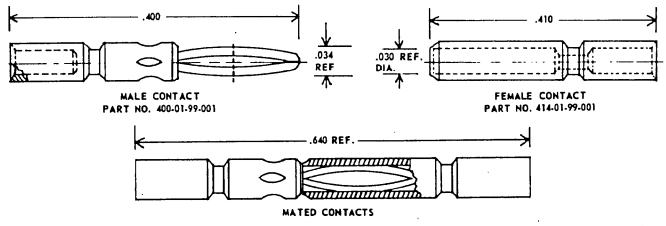
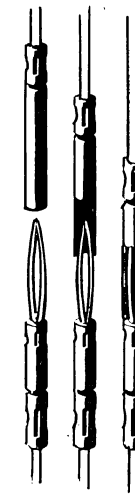
"BOW-PIN" CONTACT AND CONNECTOR STRIPS





For both miniaturization and a high degree of reliability, the Cinch "Bow-Pin" is the answer. This versatile little contact can be utilized in strip connectors (as shown), circular connectors or rack and panel connectors.

The unique "Bow-Pin" principle provides distinct advantages over conventional miniature contact devices.

Positive contact is assured by the flexing action of the bowed spring wire (unattached at the front end) that results when the contact is inserted into a tube having an ID smaller than the widest dimension of the bow.

Rugged construction—the flexing members are of relatively large cross-section to withstand abuse. No welding is used in the assembly, eliminating the possibility of heat change in spring characteristics.

The female contact is made of copper while the male contact has a copper barrel and phosphor bronze blades. Both contacts have a finish of 30 micro-inches of gold. Contact terminations will accommodate the following wire sizes: AWG 22-24-26 solid or AWG-24-26 stranded.

CONTACT PERFORMANCE DATA—Individual contact insertion/withdrawal force: 2-12 ounces; Durability: 500 cycles; Current: 3 amperes; Contact resistance: .003 ohms average; Low level contact resistance: current flowed with applied voltage of .1 microvolt. Contact resistance did not vary more than ±25% from the contact resistance measured at rated current. Shock: 9 blows of 50G per MIL-STD. 202C, Method 202B. Salt Spray: 48 hours per MIL-STD. 202C, Method 101B, Test condition B. Vibration: 5 to 2,000 cps at .5 inch displacement and 30G units.

CONNECTOR STRIPS

Cinch "Bow-Pin" connector strips provide a relatively inexpensive yet highly reliable method of interconnection for a variety of ultraminiature applications. Strips are currently available with either .075″ or .100″ center spacing. Molded of polycarbonate resin, these strips are furnished in approximately 6″ lengths and can be cut to the desired length and number of contacts.

CANNON® AUDIO CONNECTORS for low level circuit applications

CANNON PLUGS

ITT Cannon Audio Connectors are designed for use on audio/video and other low level circuit applications in the electronic/industrial fields where reliability, quiet operation and the elimination of mechanical interference are necessary. Some common uses are: microphones, tape recorders, hi-fi equipment, medical instruments, cameras, test instrumentation and computers.

XLR CONNECTOR SERIES

The XLR incorporates the most advanced audio/electronic design concepts. Small and compact, it features resilient insulators on the socket side plus resilient ribs for shock protection and quiet operation.

Shells are aluminum alloy (receptacles), or steel or aluminum alloy (plugs), with satin nickel finish. Insulators are rigid molded plastic (pin side), or resilient polychloroprene (socket side). Contacts are brass, silver plated. Coupling is by the latch-lock method.

FEATURES

• QUIET OPERATION

Thick aluminum cross sections for shell strength, plus resilient insulators and resilient ribs on the socket side, insure elimination of mechanical interference from shock.

• EASY TO WORK WITH

Finger grips for positive handling.

Integral cable clamp with two clamping positions for positive grip on cable sizes from 7/32 to 5/16 of an inch.

Large internal space for ease of wiring.

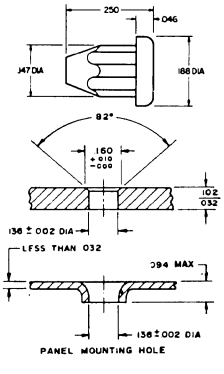
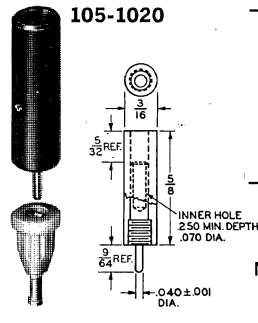
Rib-Loc terminals and jacks

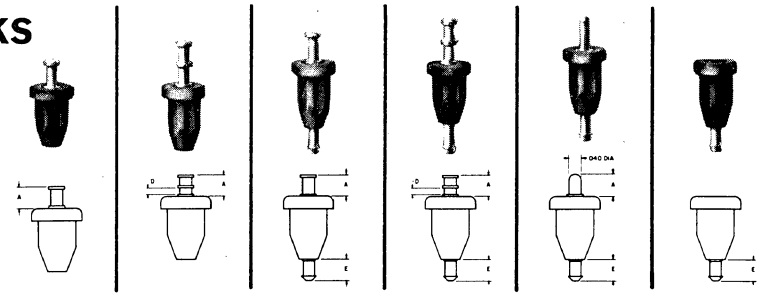
®

Johnson "Rib-Loc" insulated components offer advantages over TFE insulated types at a substantially lower price. Now your commercial equipment designs can reflect size reductions formerly limited to military equipment applications because of high cost considerations. Once installed, "Rib-Loc" design offers excellent retention—considerably better than the most widely used TFE insulated types.

Terminals are brass, silver-plated and Iridited for good solderability. "Rib-Loc" components are available in six attractive colors to Federal Standard 595: white, red, black, green, yellow and blue.







Specifications, all "Rib-Loc" components:

Pullout force 21 lbs.; turning torque 18 oz. in.; capacitance, .050" thick panel at 1 mc., 1.00 pf.; flashover voltage (DC) 5300; max. service temperature 250° F.; leakage current at 3500 VDC, .01 ua. These are typical test measurements, not necessarily limit values.

The finest grade laminated phenolic sheets we use in our production fabrication are available to you in a range of standard sizes or special sizes cut to order; and in a variety of types.

NEMA GRADE XXXP-MIL-P-3115C, paper base electrical-color natural. Most commonly used for panels and terminal boards. Excellent electrical grade and dimensional stability. Max. operating temp. continuous 250 deg. F.

NEMA GRADE G-10, MIL-P-18177B-GEE, color green **GLASS CLOTH EPOXY.** Superior chemical resistance, excellent mechanical and electrical properties. Max. operating temp. continuous 300 deg. F.

COPPER CLAD LAMINATES, XXXP MIL-P-13949 TYPE PP and **GLASS EPOXY MIL-P-13949B TYPE FL-GE,** are used mainly for printed circuitry. The copper foil serves as the conductor and the laminate provides the insulating support. 2-ounce copper foil is laminated to one or both sides of the insulator. **We catalog both types in XXXP and G-10.**

FIBERGLASS REINFORCED POLYESTER NEMA GRADE GPO-1 with a class 155C (300°F) rating. Color is Tan. Excellent mechanical and electrical properties. Fabricates similar to Phenolic and can be punched cold.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample $\frac{7}{32}$" jaw spread. $1\frac{3}{32}$" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

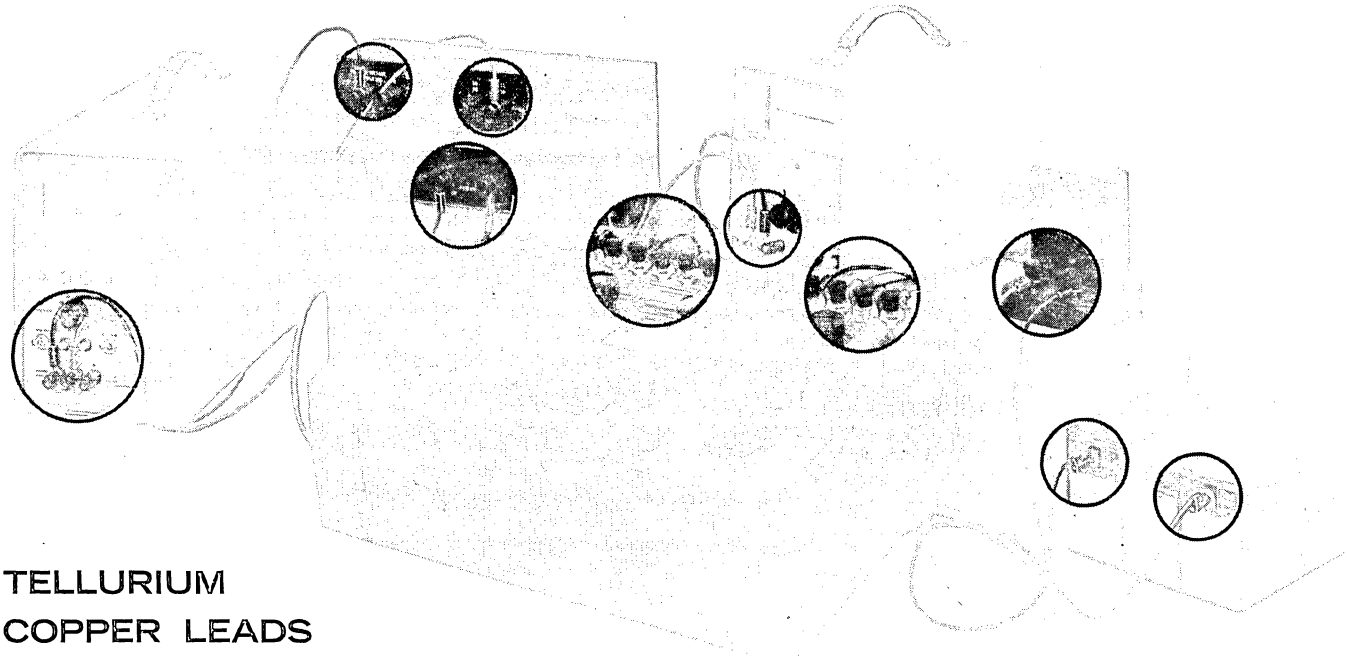
JUMPERS — LOW THERMAL E.M.F.



TELLURIUM COPPER LEADS FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed for use with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.
Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper gold plated spade lugs cold-staked to multi-stranded 12 gauge COPPER wire minimize thermoelectric effects—an absolute necessity for low voltage, high precision measurements.

LOW RESISTANCE—12 gauge multi-stranded COPPER wire results in extremely low cable resistance. Spade lugs plated with 50 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts. (Less than 0.01 μv/c°).

PRESS-FIT® TEFLON* CLOVERLEAF® RECEPTACLES

. . . providing the economies of dip-soldering with the inherent reliability of wired chassis construction

The "Press-Fit" Cloverleaf Receptacle provides economical yet uniformly perfect solder joints by means of dip soldering on a metal chassis. The unique Cloverleaf configuration permits insertion of four or more wire leads, plus an optional center post for mounting additional components after the dip-soldering operation. This design provides an encompassing hold on the leads, while providing for excellent capillary flow of solder. The Cloverleaf receptacle is a Sealectro "Press-Fit" design. Virgin Teflon insulation, precisely machined to "Press-Fit" into the chassis provides fast, positive and economical installation.

The reliability of dip solder joints made with the Cloverleaf receptacle, combined with the inherent dependability and repairability of metal chassis construction makes it ideal for use in high density, complex electronic instrumentation packaging, while the low cost of the terminal and its simple installation provides a new and outstanding assembly technique for premium quality radio and television manufacturing.

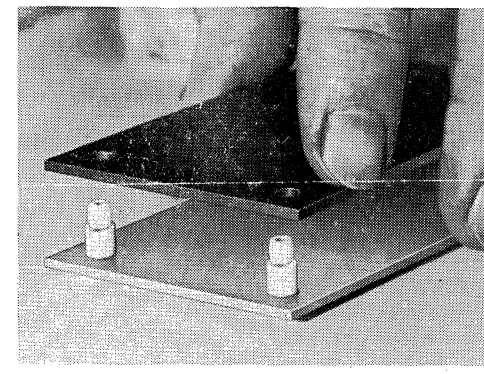
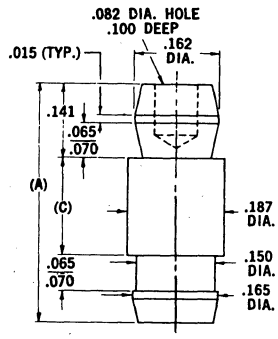
PRESS-FIT® TEFLON** SPACER/BUSHINGS

The Newest and Best Way to Mount P.C. Boards to Metal Panels and Chassis

Mount and insulate P.C. boards on metal chassis or panels without nuts, bolts, or lock washers. The new Press-Fit Teflon* Spacer/Bushings save assembly time while providing an economical and mechanically secure mounting device.

Machined from pure Teflon*, these new units are designed for various thickness P.C. boards and chassis or panels. Insertion in the chassis is a simple, one-step operation. The grommet end of each Spacer/Bushing is simply snapped in pre-drilled or punched metal chassis holes with entrance edge broken. Once inserted, they're in for good. P.C. boards require only mating holes for the opposite end of the Spacer/Bushing and may be snapped on and off of the mother board at will.





NOTE: Mtg. Hole .152 ±.002 Dia. in .062 ±.006 thick chassis.
